

CTZ
MOBILE WHAREHOUSE

We make retractable, self-supporting mobile warehouses helpful in creating new work spaces. Our **CTZ Mobile Covering Shed**, lame model, is a self-supporting retractable structure made up of pairs of uprights above which trusses are attached through bolted plates with type 8.8 bolts and self-locking nuts. They are sliding on one side on ground rail and on the opposite side on a rail track fixed on beams, supported by pillars with standard center distances of 5,000\6,000 mm. Our Copritutto **CTZ mobile warehouse** consists of steel uprights that run on a galvanized Sigma profile rail, that has been configured with special wings to prevent derailment and lifting of the structure. Where there is a strong concrete floor rails are fixed to the ground on concrete curbs, at the client's care and expense, with appropriately sized dowels.

Ground-side and overhead running wheels

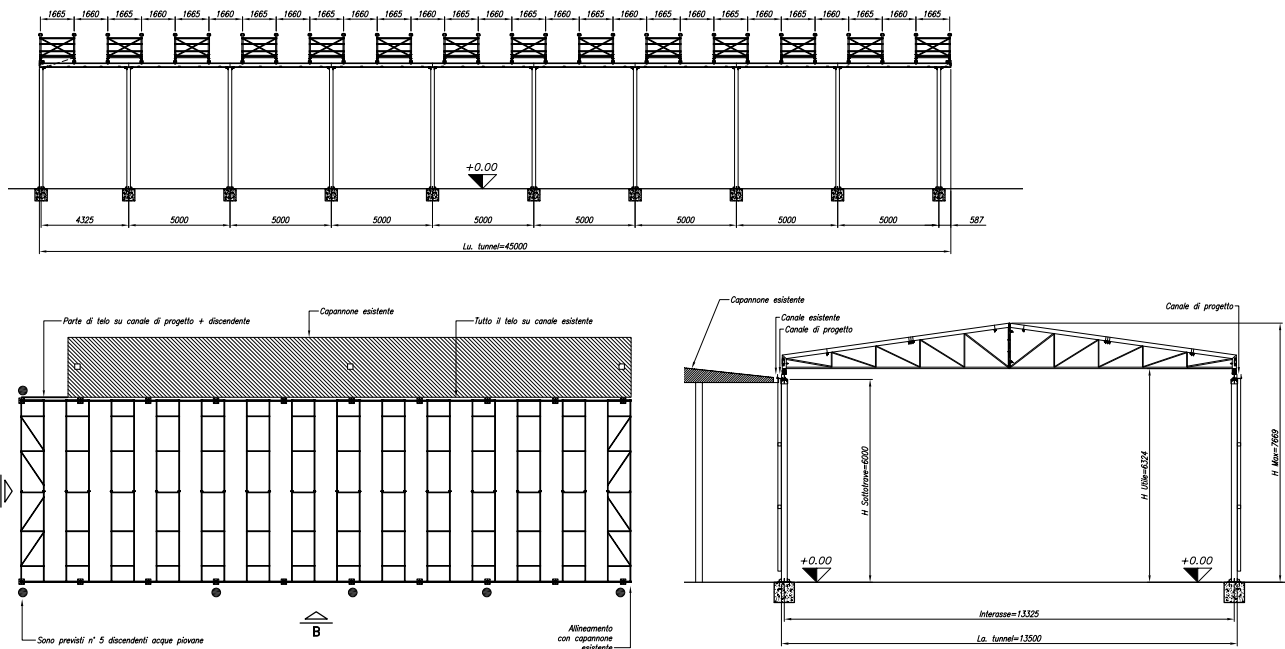

CTDZ
MOBILE WHAREHOUSE

We make self-supported mobile warehouses useful for creating new work spaces. Our **Copritutto CTDZ mobile warehouse**, double lame model, is a double-slope mobile tunnel consisting of pairs of trusses sliding both sides on an overhead rail supported by pillar using steel wheels. Our **Copritutto CTDZ mobile warehouse** is built in accordance with the current regulations. To support the structure we use strong hot-dip galvanized steel trusses and pillars made of appropriate profile. In case of movrmnts the structure will slide for about 50% of its length. In addition, the trusses will have an adequate slope to drain both rainwater and snow.

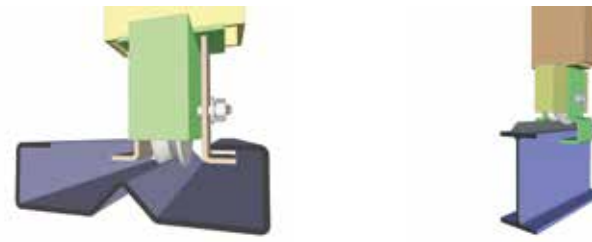

Ground-side and overhead running wheels

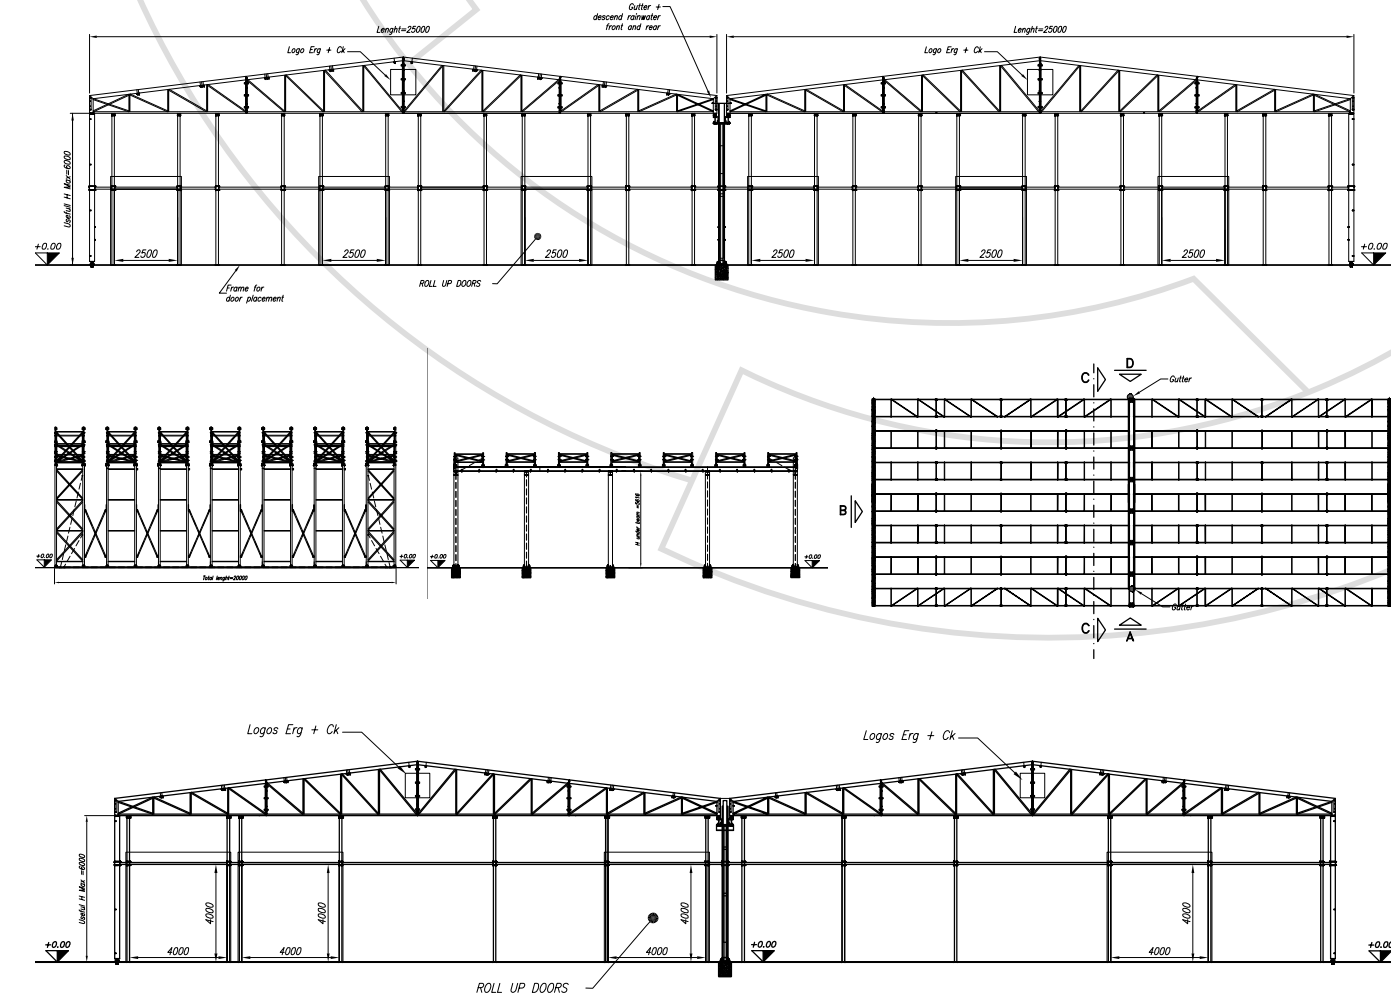

CTZA
MOBILE WHAREHOUSE

We make self-supported mobile warehouses useful for creating new work spaces. Our **Copritutto CTZA Mobile warehouse** consists of a double side-by-side tunnel. It has been developed from a basic unit, involving the union of 2 models of Zoppo Tunnels, placed specularly to each other and fixed together. Whenever further space is required, Double lame modules can be added in the middle to this basic unit to reach the desired dimensions. Our **Copritutto CTZA Mobile Warehouse** is used when tunnel width extension exceeds 25 meters. In such a case, multiple tunnels can be joined together with a fully utilizable inner space with variable widths and lengths.

LOADING
BAYS

Coprikompatt is the only company in the sector that manufactures all the elements that make up the structures in-house, from the carpentry to the roofing fabric, always guaranteeing the best materials. Thanks to its experience in the sector and continuous research, the company also offers all the components for loading bays, which can prove useful on many occasions. Discover them all!

CSS
STANDARD LOADING BAYS
Useful connecting vehicles to loading pits having elevated floors compared to the outside floor.

CSR
FLAP LOADING BAYS
Useful for connecting vehicles to loading bays when an outside dock exists.

CSCU
COLD CUSHIONS LOADING BAYS
Suitable for low-temperature food warehouse, ensuring maximum thermal continuity.

CSC
SPIRAL LOADING BAYS AND ANGULARS
These are essential where for space reasons it is not possible to position vehicles perpendicular to the loading bays.

CST
GROUND LOADING BAYS
Suitable for connecting vehicles when the loading warehouse is on the same floor level as the outside.

HIGH-SPEED DOORS

ROCKET

HIGH-SPEED DOORS

Quick-packing door, particularly suitable for outdoor environments and large compartments.

MEGA-ROCKET

HIGH-SPEED DOORS

Fast-packing door ideal for hangars, shipyards and large industrial compartments.

ARROW

HIGH-SPEED DOORS

Vertical rapid roll-up door suitable for outdoor and indoor environments, its compact design allows maximum use of the available space.

THUNDER

HIGH-SPEED DOORS

Quick-rolling door equipped with a side seal system made of self-lubricating polymer material that allows self-repair and increased thermal insulation.

FULL-THUNDER

HIGH-SPEED DOORS

Self-repairing fast roll-up door with anti-intrusion protection and an insulated rolling shutter.
